

# Allscripts Patient Administration System (PAS)

---

Efficiently serving as a standalone patient administration solution, the Allscripts PAS offers streamlined support of appropriate workflows across administrative and clinical activity and is designed and tailored specifically for hospitals and NHS Trusts. It supports functional elements including registration, referrals, waitlists, scheduling, emergency department, outpatient, admissions, transfers, discharges and coding. Allscripts PAS delivers full bed management including ward whiteboard touchscreens and bed management dashboard, outpatient kiosks and call screens and document scanning.

## How Allscripts PAS helps

### **Inadequate flexibility**

Implements as a standalone solution or fully integrated within Allscripts Sunrise™ Electronic Patient Record (EPR). It's designed specifically for the UK health sector and delivers a wide range of administrative services.

### **Poor foundation for the path of digital excellence**

Enables interoperability by using an open platform that is based on international standards. Convenes disparate systems, enabling a streamlined deployment with low disruption.

### **Poor visibility of capacity leading to delays in planned care**

Offers simple, effective real-time bed management solution that is integral to the care process, which creates an environment for faster throughput of every patient.

### **High Did Not Attend (DNA) rate on follow-up care**

Reduces avoidable appointment waste and improves resource availability for direct clinical care through comprehensive outpatient waitlist monitoring and flexible invitation management.

### **Too many paper-based processes**

Delivers configurable tools to guide documentation in a flexible, consistent way—reducing resource cost of managing paper day to day. Improves information sharing and mitigates risk of delays in care.

## Challenges we address

- **Interoperability for digital excellence**—As the healthcare industry evolves, Allscripts understands the importance of a strong administrative foundation, especially the need for an open platform to enable the interoperability of disparate systems.
- **A comprehensive foundation for the patient administration process**—From scheduling to bed management to central submissions, it's critical for organisations of all sizes to use the real-time administrative workflows to experience tangible benefits.
- **Growth enablement based on desired operational outcomes**—Healthcare organisations empowered with flexible, configurable tools, can weather requirement changes more easily with a solid patient administration system.

## Allscripts PAS provides:

- Master Patient Index
- Referral Management and Referral to Treatment (RTT)
- Outpatient Scheduling and Management
- Waiting List Management
- Inpatient and Bed Management
- Clinical Coding
- Case note tracking
- Reporting

## Key Features

- **Real-time inpatient and bed management**—Utilising a simple effective workflow, with ward whiteboard touchscreens to manage key data and patient flow, all stakeholders have up-to-the-minute data on available beds. The detailed hospital status and potential availability issues are monitored through the bed management dashboard for early intervention where there is potential for delay in patient discharge.
- **Outpatient scheduling and management**—Supporting both eReferral and paper-based referrals, Allscripts PAS offers comprehensive scheduling and outpatient waitlist functions to support timely clinical intervention and better patient choice in the timing of care. Patient tracking and outcome documentation through a shared clinic view supports administrative and clinical management in a single workflow, either standalone or integrated with the Allscripts Sunrise EPR.
- **Reporting**—Either standalone or integrated with Allscripts Sunrise EPR, Allscripts PAS supports both traditional national coding datasets and integrated clinical data submissions. Respective to the Electronic Clinical Data Systems (ECDS) workflow, data is based on integrated administrative and clinical workflows, reducing costly data entry.

## Bringing in the power of Allscripts Sunrise

To help strengthen organisations' administrative efficiency, and to promote the highest quality patient care, Allscripts delivers a clinical solution that seamlessly integrates the benefits of Allscripts Sunrise™ directly into any existing PAS. Whether it's the Allscripts PAS or another system, this provides a clinical solution that easily supports existing technology.

Allscripts has a proven track record of success for clinical solutions, specifically the Allscripts Sunrise EPR for inpatient and outpatient care management.

Allscripts Sunrise is an advanced, interdisciplinary clinical solution that helps care teams embed desired practices and protocols into workflows. With its suite of core clinical solutions, it will ensure organisations have the right clinical system to drive towards coordinated care for each and every patient.
